#### ■ Thymeleaf

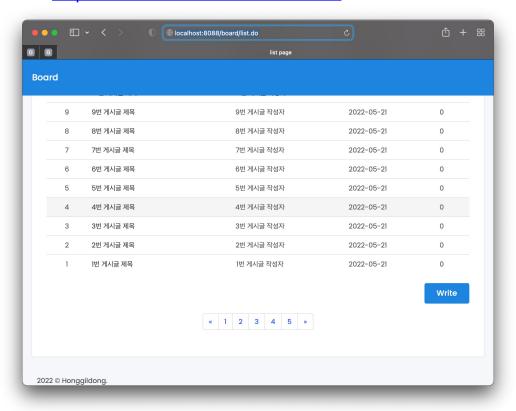

```
th:if, th:unless if - else 구문과 유사하지만 th:unless 에 반드시 조건문과 동일한 조건 써야 함
#lists.isEmpty() argument가 비어 있으면 true 리턴 하는 Thymeleaf 함수
https://www.thymeleaf.org/doc/tutorials/3.0/usingthymeleaf.html#lists

th:each JSTL의 <c:forEach>, 자바의 forEach와 유사
#strings.equals() argument1이 argument2 와 같은지 비교
https://www.thymeleaf.org/doc/tutorials/3.0/usingthymeleaf.html#strings

th:href="@{/board/view.do(idx=${row.idx})}" 일반적인 GET /board/view.do?idx=${idx}&page=${page}
Thymeleaf GET /board/view.do(idx=${idx}, page=${page})
#temporals.format() Java의 LocalDateTime 객체 값을 지정한 포맷으로 리턴
```
